Easy to carry on scalp tonic for anti-hair loss

Scalp Clinic Process at Hair salon

01 sh-Oligopeptide-1 (에스에이치-올리고펩타이드-1) – EGF (Epidermal Growth Factor)

Efficacy : ANTI-AGING, ANTI-WRINKLE, WOUND HEALING

Characteristic : It is called epidermal growth factor, and among the human growth factors that are produced directly in cells and act on human cells, it is an epithelial cell growth factor that acts on the epithelial cells that make up the skin. Until the early 20th century, its use as a medicine, such as for the treatment of diabetic foot ulcers, was restricted, but through remarkable developments in life sciences (biotechnology), it has become possible to use it as a cosmetic raw material.

02 sh-Oligopeptide-2(에스에이치-올리고펩타이드-2) – IGF-1 (Insulin-like Growth Factor 1)

Efficacy : Anti-Aging, Anti-Wrinkle, Wound Healing, Anti-Hair Loss, Hair-Growth

Characteristic : IGF-1 is called insulin-like growth factor and is a growth factor called somatomedin C, also known as sulfation factor. It performs a variety of cell physiological functions and combines with EGF and other growth factors to help skin cell growth and division, and to help produce ECM substances such as collagen, fibronectin, elastin and keratin in acne, preventing aging and wrinkles. Also, unlike EGF, it helps form healthy hair and prevents hair damage and hair loss.

03 sh-Polypeptide-1(에스에이치-폴리펩타이드-1) – bFGF (basic Fibroblast Growth Factor)

Efficacy : Anti-Aging, Anti-Wrinkle, Wound Healing, Anti-Hair Loss, Hair-Growth

Characteristic : Called basic fibroblast growth factor, bFGF stimulates keratinocytes and fibroblasts that make up the skin, regenerating the skin and restoring a healthy skin condition. It promotes the division and growth of keratinocytes and stimulates fibroblasts to promote the synthesis of ECM such as collagen, fibronectin, and elastin, thereby preventing wrinkles and performing a powerful anti-aging function.

04 sh-Polypeptide-9(에스에이치-폴리펩타이드-9) – VEGF (Vascular Endothelial Growth Factor)

Efficacy : Anti-Aging, Anti-Wrinkle, Wound Healing, Anti-Hair Loss, Hair-Growth

Characteristics: VEGF (Vascular Endothelial Growth Factor) is called vascular endothelial cell growth factor. It is a growth factor closely related to PDGF and induces new blood vessels. It also induces cell movement and physiologically performs the function of lowering blood pressure and increasing the receptivity of microvessels. Any physiological phenomenon, such as skin regeneration or hair growth, requires the creation of vascular tissue and the supply of oxygen and nutrients through it, so it is used as a very important factor in anti-aging, regeneration of damaged skin, and hair regeneration and growth.

05 sh-Polypeptide-11(에스에이치-폴리펩타이드-11) – aFGF (acidic Fibroblast Growth Factor)

Efficacy : Anti-Aging, Anti-Wrinkle, Wound Healing, Anti-Hair Loss, Hair-Growth

Characteristics: aFGF is called acid fibroblast growth factor and stimulates keratinocytes and fibroblasts that make up the skin to regenerate the skin and restore a healthy skin condition. It promotes the division and growth of keratinocytes and stimulates fibroblasts to promote the synthesis of ECM such as collagen, fibronectin, and elastin, thereby preventing wrinkles and performing a powerful anti-aging function.

cut five gold iron

컷파이버 골드아이롱

[6, 8, 10, 12, 14, 16, 18, 20, 22, 24호]
